SYSTEM AND METHOD OF MANAGING AND MONITORING CLUSTER AND GRID RESOURCES

BACKGROUND OF THE INVENTION

1. Field of the Invention

[0001] The present invention relates to a resource management system and more specifically to a system and method of managing and monitoring cluster resources.

2. Introduction

[0002] Managers of clusters desire maximum return on investment often meaning high system utilization and the ability to deliver various qualities of service to various users and groups. A cluster is typically defined as a parallel computer that is constructed of commodity components and runs as its system software commodity software. A cluster contains nodes each containing one or more processors, memory that is shared by all of the processors in the respective node and additional peripheral devices such as storage disks that are connected by a network that allows data to move between nodes. [0003] The managers of such clusters need to understand how the available resources are being delivered to the various users over time and need the ability to have the administrators tune 'cycle delivery' to satisfy the current site mission objectives. [0004] How well a scheduler succeeds can only be determined if various metrics are established and a means to measure these metrics are available. While statistics are important, their value is limited unless optimal statistical values are also known for the current environment including workload, resources, and policies. If one could determine that a site's typical workload obtained an average queue time of 3 hours on a particular system, this would be a good statistic. However, if one knew that through proper tuning, the system could deliver an average queue time of 1.2 hours with minimal negative side effects, this would be valuable knowledge.

[0005] The present invention was developed to address these issues. At its core, the invention provides a number of software tools designed to truly manage cluster resources and provide meaningful information about what is actually happening on the system. The inventions were created to satisfy real-world needs of a batch system administrator as he or she tries to balance the needs of users, staff, and managers.

BRIEF DESCRIPTION OF THE DRAWINGS

[0006] In order to describe the manner in which the above-recited and other advantages and features of the invention can be obtained, a more particular description of the invention briefly described above will be rendered by reference to specific embodiments thereof which are illustrated in the appended documents and drawings. Understanding that these drawings depict only typical embodiments of the invention and are not therefore to be considered to be limiting of its scope, the invention will be described and explained with additional specificity and detail through the use of the accompanying drawings. These drawings are found in the various documents found in the attached Appendices and will be referred to and explained in the respective document which includes the drawing.

DETAILED DESCRIPTION OF THE INVENTION

[0007] The details of the present invention will be understood with reference to the associated documents attached as Appendix A hereto and further includes a CD according to 37 C.F.R. 1.54(e) and 1.96. There are two copies of the CD (Copy 1 and Copy 2). Each copy contains the same identical set of documents. The enclosed CD Listing of Documents will set forth the documents and folders on the CD with an accompanying explanation of the subject matter of each folder. Each document contained on the CDs is incorporated herein by reference into this patent application.

[0008] The CDs contain a folder 010-0010P2-Provisional-2-CD with seven folders. The Cluster-Resources-Zipped-Software-Package folder contains the 010-0010P-2-Prov-Application tar zipped file with source code and other documents which may be utilized to create the various software components that comprise the inventions. The other six folders (beans, clustersuite-1.0.7, com-gmoab, moab-4.2.0, moabdocs and webapp) each contain documents unzipped from the 010-0010P-2-Prov-Application tar file with many of the text documents converted to MSWord to be easily read. Much of the source code (c code and header files) within these folders is contained in wordpad text files. [0009] Embodiments within the scope of the present invention may also include computer-readable media for carrying or having computer-executable instructions or data structures stored thereon. Such computer-readable media can be any available media that can be accessed by a general purpose or special purpose computer. By way of example, and not limitation, such computer-readable media can comprise RAM, ROM, EEPROM, CD-ROM or other optical disk storage, magnetic disk storage or other magnetic storage devices, or any other medium which can be used to carry or store desired program code means in the form of computer-executable instructions or data structures. When information is transferred or provided over a network or another communications connection (either hardwired, wireless, or combination thereof) to a computer, the computer properly views the connection as a computer-readable medium. Thus, any such connection is properly termed a computer-readable medium. Combinations of the above should also be included within the scope of the computer-readable media. [0010] Computer-executable instructions include, for example, instructions and data which cause a general purpose computer, special purpose computer, or special purpose processing device to perform a certain function or group of functions. Computerexecutable instructions also include program modules that are executed by computers in stand-alone or network environments. Generally, program modules include routines,

: Pa C)

programs, objects, components, and data structures, etc. that perform particular tasks or implement particular abstract data types. Computer-executable instructions, associated data structures, and program modules represent examples of the program code means for executing steps of the methods disclosed herein. The particular sequence of such executable instructions or associated data structures represents examples of corresponding acts for implementing the functions described in such steps. [0011] Those of skill in the art will appreciate that other embodiments of the invention may be practiced in network computing environments with many types of computer system configurations, including personal computers, hand-held devices, multi-processor systems, microprocessor-based or programmable consumer electronics, network PCs, minicomputers, mainframe computers, and the like. Embodiments may also be practiced in distributed computing environments where tasks are performed by local and remote processing devices that are linked (either by hardwired links, wireless links, or by a combination thereof) through a communications network. In a distributed computing environment, program modules may be located in both local and remote memory storage devices.

37 C.F.R. 1.54(e) CD LISTING OF DOCUMENTS

Mail Stop: Provisional Patent Application Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

As required by 37 C.F.R. 1.54(e), the attached CDs include the following documents. Each compact disc is created in the IBM-PC format using the MS-Windows XP operating system. The following table provides a list of files with their names, dates of creation, size in bytes and creating program.

The folders referenced below include various files for compiling and operating several software applications, including those known as Moab and Silver. One folder (item 10) contains a zip file with all the documents that can be unzipped and installed for operation. The other folders (items 1 - 9) represent the unzipped information of item 10 in which, where possible, files were converted to MSWord for easy review of the text of the documents.

Much of the source code contains in the folders are contained in simple wordpad text files.

CD LISTING OF DOCUMENTS

Item #	Title	Contained in Folder	Size in Bytes	Date of Creation	Doc. Type
1	010-0010P2-Provisional-2-CD	Top Level Folder in CD	120 MB	06/17/2004	Folder
2	Beans This folder contains java code, and MSWord documents, a zip file and other code.	010-0010P2- Provisional-2-CD	92 KB	06/16/2004	Folder
3	clustersuite-1.0.7 This folder contains MSWord documents and a moab folder and a silver folder (see below) containing code for those respective software programs. This folder further contains an autom4te.cache folder containing several MSWord documents.	010-0010P2- Provisional-2-CD	7.19 MB	06/12/2004	Folder
4	moab This folder contains an MSWord documents, source code in various wordpad documents, include files, gif files, html files, etc. needed to operate the Moab software.	010-0010P2- Provisional-2- CD/clustersuite-1.0.7	5.88 MB	6/12/2004	Folder
5	silver This folder contains an MSWord documents, source code in various wordpad documents, include files, gif files, html files, and other files needed to operate the Silver software.	010-0010P2- Provisional-2- CD/clustersuite-1.0.7	1.14 MB	06/12/2004	Folder
6	com-gmoab This folder contains an MSWord documents, source code in various wordpad documents, include files, gif files, html files, and other files needed to operate the Moab software.	010-0010P2- Provisional-2-CD	20.9 MB	06/16/2004	Folder
7	Moab-4.2.0 This folder contains an MSWord documents, source code in various wordpad documents, include files, gif files, html files, and other files needed to operate the Moab software.	010-0010P2- Provisional-2-CD	6.93 MBB	6/12/2004	Folder
8	Moabdocs This folder contains an MSWord documents, source code in various wordpad documents, include files, gif files, html files, and other files needed to operate the Moab software and present information about the software. This folder also includes a "Moab-Access-Portal" folder with documents for operating an access portal.	010-0010P2- Provisional-2-CD	18.2 MB	6/12/2004	Folder
9	Webapp This folder contains an MSWord documents, source code in various wordpad documents, include files, gif files, html files, and other files used to present a web application associated with the Moab software	010-0010P2- Provisional-2-CD	38.5 MB	06/16/2004	Folder
10	Cluster-Resources-Zipped-Software-Package This folder contains a zip file that may be unzipped to include all the source code, html, header, and all other files needed to compile and install Moab and Silver and other software. All items 1 - 9 may be obtained via unzipping this file.	010-0010P2- Provisional-2-CD	28.8 MB	06/16/2004	Folder
